SUMMARY

Frontend engineer specializing in enterprise-scale web applications. UI lead for the Data Masking & Subsetting module of Oracle Enterprise Manager, where I drove a full design-system migration of ~30 components and ~50 views and became the module's technical reference point across the wider organization. Day-to-day stack is TypeScript, JSX and Preact-based virtual-DOM components. Strengths in large-scale UI migrations, accessibility remediation under compliance deadlines, and automated test coverage for high-volume enterprise workflows. Native Spanish, C2 English.

EXPERIENCE

Oracle: Data Systems Engineer 2 (Software Developer 2)

July 2024 – Present

Oracle Enterprise Manager · Database Security Management

Guadalajara, México

- **UI lead for Data Masking & Subsetting (DMS)**, driving frontend direction for a cross-functional team of two backend engineers and one QA engineer.
- **Led the end-to-end migration of the entire DMS module to Oracle JET 18 and the Redwood design system** (Preact-based VComponent / virtual-DOM architecture, TypeScript + JSX) approximately 30 components and 50 views, spanning component code, build configuration, documentation and automated test infrastructure, and delivered with no loss of existing functionality.
- Became the recognized owner of the module: ran migration and feature demos for the wider Enterprise Manager organization, and partnered directly with the DMS product manager on scoping and delivering enhancements.
- **Remediated ~30 accessibility violations across three core workflows against a two-week compliance deadline.** Identified an internal accessibility scanning tool, became the team's subject-matter expert, introduced it to other engineers and now administer report access for the team.
- Built large-scale automated integration coverage for Autonomous Database Guided Discovery, validating system behavior under thousands of simulated agents and catching regressions before release.
- Delivered functional enhancements and reliability fixes across Data Masking workflows, and resolved customer-impacting defects in Manual Add Targets and Database Discovery.
- Currently remediating AI-related security vulnerabilities to prevent unintended exposure of sensitive information, working on short turnaround cycles with AI-assisted tooling for rapid root-cause location.

Bean Bug Corp: Partner, Software & UI Engineer

February 2026 – Present

Digital solutions agency

Guadalajara, México

- Co-founded and run a four-person agency delivering web applications and UI/UX design for external clients, owning engagements end to end from scoping and proposal through design, build and delivery.
- Ship production front ends in React with Supabase and Vercel backends; design systems, mockups and prototypes in Figma.

Intel: Software and System Validation Engineer Intern

May 2023 – June 2024

Network Division

Zapopan, Jalisco, México

- Built validation scripts and automated reporting tooling used by Network Division teams.
- Developed queries to identify target data across a dataset of 500,000+ vectors and produced analysis reports in Jupyter.

TECHNICAL SKILLS

Frontend: TypeScript, JavaScript (ES6+), JSX, React / Preact, virtual-DOM component architecture, Web Components, Oracle JET 18 (VComponent), Redwood Design System, HTML5, CSS3

Accessibility: WCAG compliance remediation, ARIA, automated accessibility scanning and audit tooling

Testing & Quality: Automated integration testing, regression suites, large-scale simulation testing

Backend & Data: SQL, PostgreSQL / Supabase, Ruby on Rails, Firebase, Python

Tools: Git, Figma, Vercel, Jupyter

EDUCATION

Tecnológico de Monterrey (ITESM): B.S. Computer Science and Technology

2024

GPA 96/100 · Zapopan, Jalisco, México

Universidad Autónoma de Baja California: Medicine (partial, 2017–2019)

Tijuana, México
